Introduction to Oracle Primavera P6
- Develop Integrated Project Management Plan how difficulty without a software?
  According to PMI’s developing an integrated Project Management plan involves 24 processes, 12 auxiliary plans, 3 baselines and set of supporting documents.
Oracle® Primavera P6 is the world’s most popular robust and easy-to-use software application for managing Projects, Programmers, and Portfolio’s. It is a browser-based solution comprising role-specific functionality to satisfy each stakeholder’s needs responsibilities and skills. It provides a single solution for successfully managing projects of all sizes, complexity and duration.
Primavera has evolved into a fully featured Enterprise Project Portfolio Management solution providing world class functionality for project-based organizations, encompassing; Planning & Scheduling, Portfolio Management, Resource management, Risk & Issue Management, Reporting & Business Intelligence & Team Collaboration.

What you will learn?
This course provides hands-on training for Primavera P6, leading participants through the entire project life cycle, from planning to execution. Topics include export activities from excel, developing task plan, resource plan, assigning resources, cost estimating and creating a baseline. Different methods of tracking are one of the unique differentiators of this program. The reporting includes building standard, visual and customized reports.

Delivery methodology
The workshop will follow a unique case project and the participants will learn the planning and tracking in a real time environment. In addition to the main case project, features specific case lets will be used for in depth understanding of the complex features.

PDUs/Certification
This workshop is a PMI approved CCR category A activity and participants will earn 24 Professional development units upon successful completion. This program will also equip professionals to qualify as Oracle Primavera P6 EPPM Certified Implementation Specialist.
